

Degreaser

23 September 2015 DATA SHEET V2

Fill – one degreaser is a heavy-duty water based degreaser, used to remove oil and dirt from soiled surfaces, which will biodegrade. It naturally and safely replaces mineral spirits and chlorinated solvent-based heavy-duty degreaser products.

ADVANTAGES

- = Waterbased thus no solvent odour.
- = Non flammable.
- = Non toxic.

HOW TO USE IT

For use on internal and external surfaces.

Can be used to clean a wide variety of substrates including floors, galvanised roofs, walls, machinery and domestic appliances including the removal of borehole water stains on painted masonry.

SPREAD RATE AND DILUTION

Amount required will depend entirely on the degree to which the surface is soiled. On galvanised roof sheets scrub the surface with stiff bristle or nylon brushes. Wash thoroughly with clean water and allow to dry before painting. Dilution of up to 1:10 is possible for lightly soiled surfaces.
